

I would like to register my concern at recent proposals to make broadband internet available over power lines (BPL/PLC). There are at present no safeguards to insure the viability of other users of the HF spectrum if BPL becomes a reality. Broadband over power lines will cause a high level of interference to shortwave broadcasters, the military, amateur radio operators, WWV, etc. I do not see how BPL can be reconciled with the use of the HF radio spectrum by myriad other services. For the reason, I oppose the adoption of BPL/PLC. I am a licensed amateur radio operator, and my callsign is W5EI

Thank you,

Don McNallen
